### **REASONS FOR ALLOWANCE**

1. The following is an examiner's statement of reasons for allowance: Claim 1 is patentable over the prior art of record because of the specific configuration of the illumination system, which comprises a plurality of solid state light emitters disposed relative to a location and operative to emit light to impinge on said location, and a scanner operative to sequentially receive light from said plurality of solid state light emitters at said location at essentially the same angle of incidence and to provide a time-multiplexed light output. The combined limitations as currently claimed are not taught by the prior art of record considered alone or in combination.

Claim 15 is patentable over the prior art of record because of the specific configuration of the system for recording information on a photosensitive surface, the system comprising a plurality of solid state light emitters operative to sequentially output pulsed light, a scanner operative to sequentially receive pulsed light from said plurality of solid state light emitters and to output a combined beam of light including light pulses from a more than one solid state light emitter, a modulator operative to modulate said combined beam, and an image scanner operative to scan said modulated combined beam to record a pattern on the photosensitized surface. The combined limitations as currently claimed are not taught by the prior art of record considered alone or in combination.

Claim 23 is patentable over the prior art of record because of the specific method for generating a light beam, the method comprising disposing a plurality of solid state light emitters relative to a location, emitting light from the plurality of solid state light

emitters to impinge on said location, and scanning said emitters to sequentially receive light at said location at essentially the same angle of incidence and to provide a time-multiplexed light output. The combined limitations as currently claimed are not taught by the prior art of record considered alone or in combination.

Claim 36 is patentable over the prior art of record because of the specific method for recording information on a surface, the method comprising sequentially outputting pulsed light from solid state light emitters, sequentially receiving pulsed light from said plurality of solid state light emitters and outputting a combined beam of light including light pulses from a more than one solid state light emitter, modulating said combined beam, and scanning said modulated combined beam to record a pattern on a photosensitized surface. The combined limitations as currently claimed are not taught by the prior art of record considered alone or in combination.

Claims 2-10, 13-14, 16-22, 24-31, 34-35 and 37-43 are allowed because they are directly or indirectly dependent from claims 1, 15, 23 and 36 above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
